2019 OUTCOME REPORT

FOCUS ON IMPACT

RX PARTNERSHIP INCREASES MEDICATION ACCESS FOR VULNERABLE VIRGINIANS AND STRENGTHENS THE HEALTH SAFETY NET
I’m very grateful. My health - my life - has improved.

- LIZBETH C., PATIENT AT ARLINGTON FREE CLINIC

Over 39% of Virginia households face financial hardships and struggle to afford basic household necessities. These households face difficult choices, such as choosing between healthcare, child care, healthy food or living expenses (United Way ALICE Project). Despite Medicaid Expansion in 2019, over 300,000 Virginians are left uninsured who are not eligible for Medicaid.

RxP works through a network of 30 clinic partners, with and without pharmacies across 85 Virginia localities, to supply brand & generic medications to low-income, uninsured Virgini ans. Our cost-effective programs ensure the most vulnerable Virginians have access to the medications they need to manage their chronic conditions, continue working and live healthy and productive lives.

A future where every Virginian has access to the medication they need.

Every $1 donated provides $30 in medication value to patients.

**Our Impact in 2019**

- 9,724 patients
- 49,981 RxS
- $16.7 million retail value

**The Opioid Addiction Crisis Doing Our Part**

Rx Partnership has continued to do what we can to prevent drug misuse/abuse and support medication adherence. We:

- Facilitated the transfer of 300 EVZIO® (naloxone HCl injection) auto-injectors at no charge to 30 safety net clinics to help save Virginians from opioid overdose deaths
- Distributed 2,000 DisposeRx drug deactivation packets to ensure the proper disposal of unused or expired prescription drugs so they don’t end up in the wrong hands or pollute waterways
- Provided 6,000 pill boxes and 1,500 medication adherence blue bags toolkits to help patients understand and manage their medications

**Accomplishments**

- Increased program eligibility to 300% federal poverty level (FPL)
- Increased the number of generic medications offered to clinic partners without pharmacies by 26%, including medications to treat behavioral health conditions
- Added 5 new clinic partners
- Provided generic medication to our clinic partners without a pharmacy 61% cheaper than an average retail pharmacy
- Piloted a new program that provides the top 10 most dispensed generic medications (heavily focused on hypertension) to clinic partners with pharmacies at no cost and is projected to increase prescriptions dispensed by 20%

Thanks to this clinic and the medications I get here, I’ve been able to get and take all my prescriptions the way I’m supposed to and I haven’t had to go to the emergency room, not once, since I’ve been coming here.
WHO WE SERVE
- Uninsured
- Low-income ≤300% FPL
- Adults ages 19-64
- 81% are part of working families
- On average, have at least 3 chronic conditions and take 5 medications
